

The Crimper has 5 different functions

After measuring the necessary wire, cut it.

Place it into the jaw of the stripper

Position the stripper on the top of a strong post

Knock gently to cut the cable

Pull the cable. the tripping is as long as the stripper

Push the cable on the side of the cable

Press the harness of wires so they can slip intirely into the slug Force the cable totaly in

Now place the slug between the jaws of the crimper

Cosh hard 6 or 7 times to really crush the slug

You now have done a professional crimping

The socket wrench, is handy to tighten a nut.

Or Insert the bit into the bit holder

to have a handy screw driver.
